Sprint 1 Development Review

Dear Development Team 48,

Thank you for your demonstration regarding development so far throughout this project. The presentation gave us great insight on the progression so far and the quality that we can expect for the finalized project.

❖ Preparation

The project meeting gave us the impression that it was well planned and prepared beforehand. Each feature and topic about the website flowed seamlessly in the discussion and all grounds were covered in a precise, professional manner. Although some of the expected features had not been implemented, your reasoning and explanations were very understandable and justified. We will be pleased if this level on detail continues in further meetings.

❖ Our Expectations

The majority of our expectations were met in this project, with only minor details and features being excluded. We appreciate your reasonable justification to these issues and understand that you will have completed them along with the next sprint plan. In the aspects of the sprint plan that were completed, they were done with great precision and we were very impressed; the carousel on your website being a fine example of this level of detail.

Along with the features presented in sprint plan 1, you even showed us extra features you had also implemented. We appreciate the enthusiasm to go above and beyond the what was planned and we would be pleased if this continued, however in the future, we recommend that you complete what is necessary in the current sprint plan before implementing new features.

❖ Technical Level

Now looking at the presentation from a technical aspect, we were very satisfied with what was shown. We were pleased to hear both the front end and back end of the project had been worked on thoroughly and understand that you have had technical issues when integrating them. From looking at the level of

detail in other aspects, such as the wireframe shown, we firmly believe that you will do an excellent job in integrating database and we look forward to seeing what you can do.

❖ Professionalism

Our team was very satisfied to see the presentation shown in a very professional manner. Everyone communicated very clearly and seemed to have a profound knowledge on what they had been working on. It was rewarding to see everyone involved in the project, however towards the end of the meeting session, it seemed that one or two members lost focus and were not acting appropriately. This however can easily be rectified and we know it will not be a problem in the future.

Overall, our team was very gratified on what has been completed so far and the professionalism that you have shown so far. Any issues with the project have been very minor implications and we are not concerned about them at all. We look forward to our next meeting and cannot wait to see what has been implemented in the project.

Sincerely

Mika Williams
